

Where is the camp being held?

The camp is entirely online. We will teach and meet students online as we have thousands of students across the nation. Plus, we have tools like our learning center and coding center, which are very effective. Check out what students think about us here: <https://www.trustpilot.com/review/ai-camp.org>.

Is online learning effective for learning AI?

Yes, our past experience and data proved that our students can excel in coding and AI. We have taught thousands of students online as well as offline. Given our experience and constantly evolving curriculum we know that online learning is highly effective.

Beyond our unique learning approach we also use cutting edge technologies to bring learning to life. We have both a Learning Center and an interactive coding environment.

Our Learning Center is equipped to help students learn AI. All learning material such as Homework and Lessons are hosted there.

We also have the Coding Center which is where the magic of building AI takes place.

Through the Coding Center we are able to provide a powerful cloud computer to our students. In this environment, we can view what students are typing in real-time and allows us to provide individualized instruction.

What programming languages will students learn?

We teach the essentials for building an AI product so that students can start tinkering as fast as possible.

To accomplish this we use Python in combination with Pandas for data manipulation. We also cover data engineering systems like data lakes and pipelines.

In deep learning, we give an overview of simple feed-forward networks, convolutional networks, network training, and computer vision.

Our curriculum is also tailored to the project that students choose to pursue. For a more detailed description of the curriculum please check out our curriculum page: www.ai-camp.org/curriculum

What would students do after AI Camp?

The two major things we emphasize during the camp is 1) how to learn on your own by taking advantage of

the vast resources online, 2) to give you confidence that you can learn without a doubt learn complicated concepts on your own. We do that through learning about AI and making an AI product (fun fact: 90% of professionals never make any products end-to-end on their own). The internet has transformed how we collectively store, index, and retrieve information. While professionals have taken great advantages of this (like Github, Stackoverflow, Medium articles, and Youtube Tutorials), our educational system and methods have been falling behind on utilizing this amazing resource. We hope to change that. So yes, we want to change how students learn, and our 1:1 program, summer and winter camps are our vehicle to do that.

When a student is really paying attention to us, what we see is that students start learning on their own and building really interesting projects. We take the best of them and start working on our internship program. Check out some of the amazing stuff they are building in just 10 weeks!

About AI Camp

AI Camp was founded to revolutionize AI education around the world. In doing so, we have helped thousands of students prepare for university, industry, and oftentimes both.

Our superpower is our unique teaching approach. It is a fusion of the world's best instructors (Stanford, CMU, etc.) and small class sizes that makes AI education intuitive, accessible, and successful.

We don't teach from A to Z. Instead, our students learn by doing. They build impressive AI products, develop in-demand skills, and forge powerful connections with our mentors and advisors.

AI camp is in the business of providing opportunity. We are unified by the maxim that we are only as great as the doors we open.

Why are you doing this?

We experienced first-hand that our traditional education did not prepare us for the real world. Even though we had advanced degrees from top universities, the job market was tough as we did not know what jobs were available, what to learn, or who could help.

In addition, college tuition has skyrocketed. Student debt in the U.S. has exceeded 1.6 trillion dollars with the average student having \$35,000 of debt by the time they graduate. To make matters worse 50% of graduating students are unable to find a job with their degree. This must change.

We founded this camp to help students prepare for the real world. We hope that AI Camp can serve as early intervention in a student's life so that they are able to design the lives they want to have.

Our students not only learn AI but also how to pick a major, how to learn, network, and eventually become leaders in their chosen fields.

What are the class sizes?

Class sizes vary from 1:1 to 1:6 (student/teacher) depending on the program.

For a specific program please refer to the respective FAQ section.

What is the reservation fee?

The reservation fee is what we use to hold your place in camp before you make a payment. It will be used towards the cost of the camp once you reach the payment stage!

Is the reservation fee refundable?

The reservation fee is used towards the tuition once you make your payment. If you want to cancel your spot at Camp, the reservation fee for Summer 2023 is completely refundable until 05/19. You can be refunded by going directly to your student dashboard.

Can I change my batch choices?

Yes. You can change your batch choices in your student dashboard. Please keep in mind the deadline for changing your batch for Winter 2022 Camp is 12/08 and for Summer 2023 Camps is 05/19.

What is your cancellation policy?

You can cancel registration and receive a full refund of any tuition paid and the reservation fee if you request a refund through your student dashboard before the deadline. The deadline to cancel or make changes for our Winter 2022 Camp is 12/08. The deadline to cancel or make changes for our Summer 2023 Camps is 05/19.

Do you provide scholarships?

We provide scholarships for the Winter and the Summer Camp Program but it is limited to specific times in the year.

At this time we do not offer scholarships for our 1:1 Mentorship Program.

What criteria did you have when issuing scholarships?

We looked at primarily two categories. The first factor we look at is whether you are from a low-income family or not. We issue full scholarships to exclusively low income families, but we require an income verification through tax documents. We have always reserved 10% of camp spots for full scholarships as part of our initiative for diversity and inclusion in the space. The second factor we look at is how well the student could take advantage of our program. We look at their essay questions and determine that. Make sure you write a thoughtful application to maximize your chance of getting scholarships.

Why are you issuing scholarships?

Because we want to spread the knowledge of AI, and we believe it's very important learning by doing. Our founders are from low-income families and we want to help.

Can the early bird discount be combined with the partial scholarship?

Early bird discount cannot be combined with any scholarship.

Are you affiliated with Stanford University?

No. But our founders are graduates from Stanford University, we have a Stanford Professor as our advisor (Prof. Tsachy Weissman, who is a pioneer in information theory), and we have taught at Stanford University.

What is AI on Thumbs? How can I download and use it?

This is our student made mobile app that aims to democratize the knowledge of artificial intelligence. Our promise is that if you have thumbs, you can learn AI! Download and try it out - iOS or Android.
